

706

TLEBAEV K.B.

OPTICS

The book cover features a blue background with a faint, large-scale geometric pattern resembling a molecular or atomic structure. In the top right corner, there is a circular inset showing a 3D diagram of a light ray passing through a triangular prism, which disperses the light into a spectrum of colors. In the bottom right corner, another circular inset shows a diagram of light rays passing through a lens, with labels for focal points and distances. The title 'OPTICS' is prominently displayed in the center in a large, bold, white sans-serif font. The author's name 'TLEBAEV K.B.' is positioned above the title in a smaller, white sans-serif font. In the top left corner, the number '706' is written in a light blue, handwritten-style font.

T66 **OPTICS: Textbook – (Revised edition).** Almaty: KazNPU named after Abai,
Publishing house «Ulagat», 2024. – 232 p.

ISBN 978-601-353-282-0

This textbook is a general physics course for students of educational and technical specialties. It covers all standard introductory topics such as geometrics, waves and the actions of light. The main theoretical concepts are formulated in a logical way. The textbook provides many examples and practical tasks that contribute to the understanding and assimilation of theoretical material.

CONTENTS

PREFACE	3
CHAPTER 1 The nature and propagation of light	
1.1 Nature of light	4
1.2 Sources of light	5
1.3 The speed of light	7
1.4 The electromagnetic spectrum	10
1.5 Waves, wave fronts and rays	12
1.6 The ray model of light	13
1.7 Reflection and refraction	14
1.8 Total internal reflection	20
1.9 Huygens' principle	22
1.10 Dispersion	27
1.11 Absorption	29
1.12 Illumination	30
CHAPTER 2 Images Formed by a Single Surface	
2.1 Introduction	45
2.2 Reflection at a plane surface	46
2.3 Reflection at a spherical mirror	50
2.4 Focal point and focal length	57
2.5 Graphical methods	59
2.6 Refraction at a plane surface	61
2.7 Refraction at a spherical surface	65
2.8 Summary	70

CHAPTER 3 Lenses and Optical Instruments

3.1 Images as objects	76
3.2 The thin lens	77
3.3 Diverging lenses	82
3.4 Graphical methods	83
3.5 Images as objects for lenses	85
3.6 Lens aberrations	86
3.7 The eye	88
3.8 Defects of vision	90
3.9 The magnifier	93
3.10 The camera	94
3.11 The projector	96
3.12 The compound microscope	98
3.13 Telescopes	99

CHAPTER 4 Interference and Diffraction

4.1 Interference and coherent sources	115
4.2 Young's experiment and Pohl's experiment	119
4.3 Intensity distribution in interference fringes	123
4.4 Interference in thin films. Newton's rings	127
4.5 Thin coatings on glass	132
4.6 The Michelson interferometer	133
4.7 Fresnel diffraction	137
4.8 Fraunhofer diffraction from a single slit	141
4.9 The diffraction grating	148

4.10 Diffraction of X-rays by a crystal	153
4.11 The resolving power of optical instruments	155
4.12 Holography	158
CHAPTER 5 Polarization	
5.1 Polarization	169
5.2 Malus' law and percent polarization	172
5.3 Polarization by reflection	175
5.4 Double refraction	177
5.5 Polarizers	178
5.6 The scattering of light	181
5.7 Circular and elliptical polarization	183
5.8 Optical stress analysis	187
5.9 Optical activity	189
CHAPTER 6 The Actions of Light	
6.1 Emission and absorption of light	197
6.2 Thermionic emission	199
6.3 The photoelectric effect	202
6.4 The laser	207
6.5 X-ray production and scattering	211
APPENDICES	225
